Introduction
To improve the quality of every project, Monitoring, Evaluation, Accountability and Learning (MEAL) is the method to measure results and impacts. MEAL is an approach whereby not only the programs are monitored and evaluated against targets, but also the findings of these activities are explicitly fed back into program decision-making and shared with stakeholders. It is also important to reform organizational structures and procedures through accountability and learning, derived from monitoring and evaluation. This workshop will introduce ways in which principles of MEAL can be adopted by think tanks, research and academic institutions, UN and other development organizations to systematically measure their projects results.

Key Contents
▪ Understanding MEAL Methodology
▪ Designing effective programmes and envisioning results
▪ Understanding applied monitoring and evaluation techniques
▪ Understanding PERT, CPM for tracking project implementation
▪ Developing Theory of Change and Logical approaches for MEAL
▪ Digital monitoring and impact evaluations
▪ Understanding MS Project for MEAL

Who should attend?
▪ M & E Professionals, Program Managers, Project Finance Managers, Portfolio Managers, Quality Assurance Departments of public Institutions and Consultants
